

Retail Performance Review: Strategic Analytics Brief

Prepared for: Chief Executive Officer Dataset: 18 months · 50,000 records Scope: 30 stores

SITUATION SUMMARY

The business is exhibiting clear signs of structural decline across its 30-store network. An 18-month transactional dataset — spanning store performance, product sales, customer activity, and loyalty programme engagement — reveals a pattern of underperformance that, without targeted intervention, is likely to deepen. The data provides sufficient depth to isolate problem stores, diagnose product-level revenue leakage, and assess whether the existing loyalty programme is driving repeat business. Three priority questions are identified below to guide the CEO's decision-making.

AVAILABLE DATA

Store Performance	Product Sales	Customer Transactions	Loyalty Programme
Revenue & traffic metrics	SKU & category-level data	Basket & purchase history	Member activity & redemptions

PRIORITY BUSINESS QUESTIONS

1	Which stores have recorded declining revenue for three or more consecutive months, and by how much?	CRITICAL
WHY IT MATTERS	Identifies stores requiring immediate intervention — closures, restructuring, or targeted investment — before losses compound further.	
COLUMNS USED	store_id, store_location, monthly_revenue, transaction_date, revenue_target	
2	Which product categories account for 80% of revenue, and which are responsible for the largest margin losses over the past 12 months?	HIGH PRIORITY
WHY IT MATTERS	Directs range rationalisation decisions — doubling down on profitable lines and discontinuing low-margin products draining working capital.	
COLUMNS USED	product_id, product_category, units_sold, unit_price, cost_price, transaction_date	
3	What percentage of loyalty programme members have made a repeat purchase within 90 days, compared to non-members?	OPPORTUNITY
WHY IT MATTERS	Determines whether the loyalty programme drives retention or represents a cost without measurable return — informing whether to reform, expand, or retire it.	
COLUMNS USED	customer_id, loyalty_member_flag, purchase_date, transaction_value, repeat_visit_count	

Answering these three questions in priority order will provide the CEO with a clear, evidence-based foundation for store rationalisation, product strategy, and customer retention decisions.
